

The complete portfolio

By Gary Hutton, General Manager at Black Millwork

BLACK MILLWORK IS THE LEADING SUPPLIER OF ONE OF THE MOST EXTENSIVE AND ECO FRIENDLY RANGES OF TIMBER BASED WINDOWS AND DOORS CURRENTLY AVAILABLE ON THE UK MARKET.

With an in-depth knowledge of the fenestration market, Black Millwork offers a comprehensive portfolio including Andersen's extensive range of high performance, low maintenance wood windows and patio doors, the Eagle range of aluminium clad timber windows and Black Millwork's recently launched own range of solid timber windows and doors.

This wide choice provides endless possibilities for design creativity to suit most building applications, whether residential or commercial and offers architects, specifiers and housebuilders a one-stop-shop for high quality timber windows and doors.

Andersen's range of natural solid wood windows and doors offers over 200,000

configurations of different shapes, sizes, designs and colours. The low maintenance exterior finish never needs painting or staining. By incorporating Perma-Shield® on to the exterior, a tough, protective shell is produced that does not chip, rot or fade, whilst the knot-free pine on the interior can be stained, varnished or painted to suit any interior décor. The Low-E4™ glass is self-cleaning and highly energy efficient and the entire range is BBA approved for performance and meets all current building regulations.

Eagle windows and doors combine the best of both worlds. From the inside, the warmth and character that only timber can achieve, whilst an aluminium clad external face provides a superior exterior finish that resists

the elements of inclement weather, abrasion and impact. A choice from nine wood species, including oak, maple and cherry, can be combined with over 50 exterior colours, from Harvest Gold to Caribbean Blue, or a bespoke colour matching.

Wood has always been a reliable material and Black Millwork's new engineered timber components ensure a truly robust and durable material that helps to reduce the carbon footprint of the building.

Long-lasting performance, quality craftsmanship and durability are all demonstrated through the solid wood construction, low-maintenance exteriors and energy efficient design across all of the brands. With the focus on designing buildings that are sustainable, Black Millwork's complete portfolio of windows and doors made from solid timber and wood combined with low maintenance Perma-Shield®, GRP and aluminium, provides a complete eco-friendly package designed to meet all specifiers' fenestration requirements.

The company is soon to be launching Black Millwork entranceways and extending its range of bi-folding doors to include aluminium, aluminium/timber and oak options to add to the existing engineered timber options.
