
Black Millwork range of doors & windows

The Black Millwork range of doors and windows has been extended to include bi-fold doors. The bi-fold doors are manufactured from laminated timber, engineered pine or oak, aluminium timber clad oak or aluminium and supplied fully finished in white as standard, with additional options for more RAL colour variations. Units can also be stained or lacquer finished.

All units have been tested to EN1279 and fully glazed with Pilkington Toughened Low E glazing, with upgraded Thermix spacer and argon fill. The aluminium option benefits from two extremely narrow profiles of 70 and 45mm, with timber options offering between 70 and 115mm, meaning larger glass panels can be installed. The engineered timber frame

offers a slightly larger profile, for applications requiring a different more traditional, aesthetic approach. Black Millwork Bi-fold doors are fitted with polished chrome handles as standard, but can also be supplied in white, anodised silver, polished and anodised gold or black, with a further choice of any custom RAL colour on request.
