DEALER BULLETIN

Date; 18th June 2010
BULLETIN No; BMW-1210
SUBJECT; SIZE LIMITATIONS & HANDLING
EFFECTIVE; IMMEDIATE

BULLETIN DETAILS

Dealers are reminded that when quoting for a combination unit or a singular product, that consideration should be given as to their delivery and handling.

When quoting for Andersen products, any combination of units that exceeds 2.4 metres x 2.4 metres should be quoted for site mulling only, instead of choosing and not as factory mulled.

When designing large Andersen Flexiframes, consideration should be given to the overall size, weight and how it can be transported to site, then the implications of handling large and heavy units to the appropriate opening.

When designing and requesting quotes for Black Millwork Products, units exceeding these sizes, where possible will be shipped in sections for assembly on site, as it is not possible to ship any units when both the height and width exceed 2.4metres.

Allowing for all of the above considerations will assist in the transport and handling of each unit.

However, we do understand that in some circumstances units will be large and heavy in design. But by raising these issues now, it will help you to understand the implications involved in extra transport costs and manpower required on site to handle these units.
